

# Using Data to Make Decisions

## *A Presentation of RMC Research*

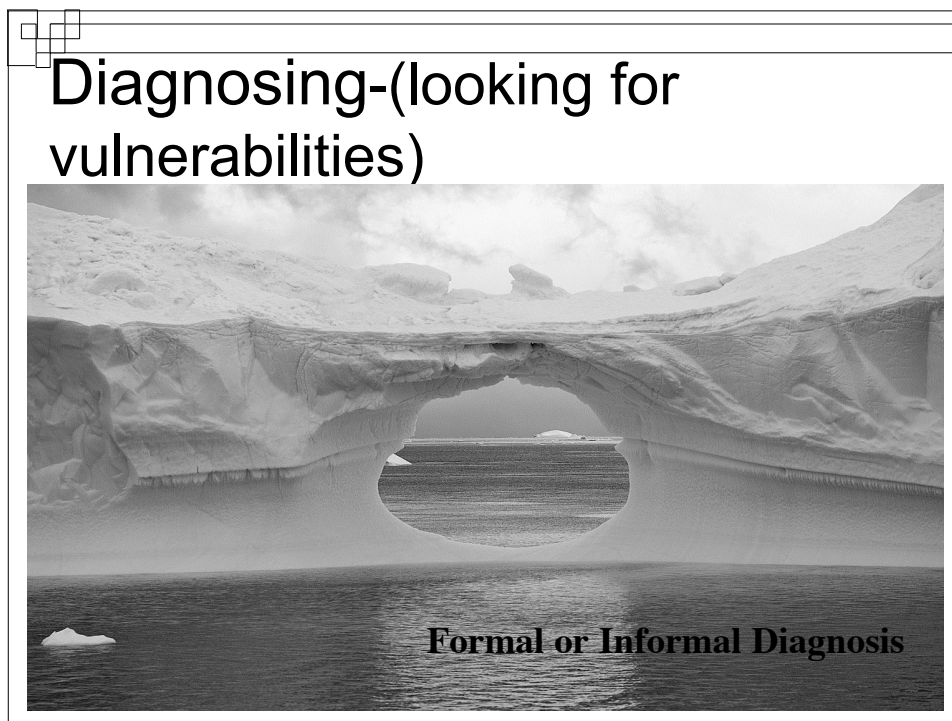

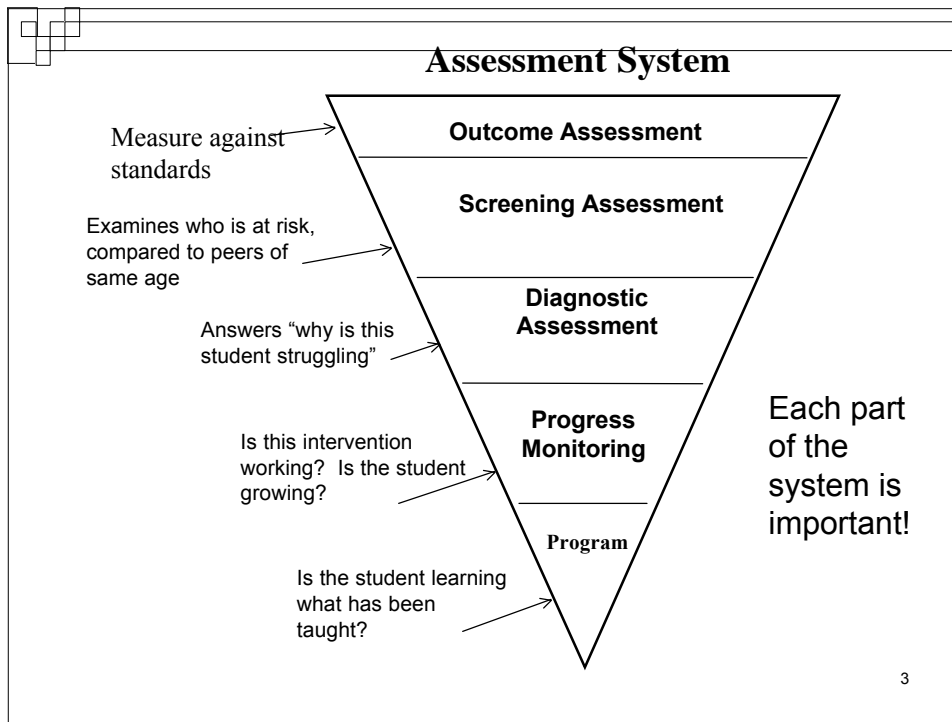

**PRESENTER: Lexie  
Domaradzki**

**DATE: June 2, 2010**

## Goals for Session

- Increase skill with using Diagnostic measures
- Increase skill with understanding rate and accuracy issues
- Continue to build fluency with analyzing AIMSweb data

## Schools Often Use Only Six Steps

1. Establish an evidence-based core reading or language arts program appropriate to student and teacher population. Use DATA to determine if the core programs are effective.
2. Screen students and use DATA from screening assessment to identify those who may not be reading as well as expected for a grade level.
3. Group students with similar instructional needs based on the screening DATA.
4. Plan instruction based on DATA acquired during screening.
5. Teach students in small, homogenous groups. Use progress monitoring DATA to adjust instruction.
6. Progress monitor students and use DATA to adjust instruction accordingly.

## Seven Steps to Achieve the Best Results

1. Establish an evidence-based core reading or language arts program appropriate to student and teacher population. Use DATA to determine if the core programs are effective.
2. Screen students and use DATA from screening assessment to identify those who may not be reading as well as expected for a grade level.
3. ***Diagnose weaknesses and use diagnostic assessment DATA to pinpoint the specific weaknesses of students identified during screening who are not performing as expected.***
4. Group students with similar instructional needs based on the screening and diagnostic DATA.
5. Plan instruction based on DATA acquired during screening and diagnosis.
6. Teach students in small, homogenous groups. Use progress monitoring DATA to adjust instruction.
7. Progress monitor students and use DATA to adjust instruction accordingly.

## Two Types of Diagnostic Assessments

### ■ Formal

- Administered by experts
- Given to students with significant and unexplained reading weaknesses
- Most often are normed and provide percentiles for each skill measured
- Often used to place students for special services
- Examples are: Woodcock-Johnson, GORT

### ■ Informal

- Do not have to be given by experts
- Provide information about strengths and weaknesses for specific skills
- Designed to be used to guide instruction
- Most often do not provide norms

## Decoding Is Essential for Reading Comprehension at All Ages

### ■ Assess decoding abilities first.

- If students cannot decode well and easily, reading fluency and comprehension will be hindered even if the students have strong vocabularies and comprehension abilities.

## Beginning Decoding Skills

- Beginning decoding skills include the ability to read words with:
  - short vowels
  - digraphs
  - blends.
- The Beginning Decoding Survey also includes high frequency words that do not have short vowels.

## Why Students in Higher Grades Have Decoding Problems

High school students tell us what they did when they didn't know a word.

- Problems often don't show up until higher grades because students guessed successfully in the early grades when words are easy to guess.
- Older students experience less and less success with guessing as text becomes more difficult.

## Appropriate Ages for the Beginning Decoding Survey

- Beginning Decoding Surveys are appropriate from the **middle of first grade on**.
- For all students, **ALWAYS** start with a Beginning Decoding Survey
  - Short vowels are a problem for many students of all ages who do not read proficiently.
  - The Beginning Decoding Survey will identify almost all short vowel difficulties.

## What Do Your Students Do When They Don't Know How to Decode?

- Skip words
- Add words
- Misread vowels (*bench* for *bunch*)
- Guess based on context (*mom* for *mother*)
- Misread multi-syllabic words
- Misread or skip articles (*in, of, the, to, etc.*)

These errors will lead to comprehension mistakes . . . not always, but sometimes.

# Digraphs and Blends

Digraphs are two letters that spell one sound.

□ Common consonant digraphs on the Surveys:

- sh - s h e
- ch - c h a p
- wh - w h i p
- th - t h e n or t h u m b
- ck - b a c k

Blends are two consonant letters together, each with its own sound.

□ A few blends on the Surveys are:

- st - m u s t, s t o p
- tr - t r a p
- nd - b a n d
- br - b r a t

## Beginning Decoding Survey

### 50 Very Easy One-Syllable Words

5 high frequency words →

5 real words with short vowels & 3 letters →

5 real words with short vowels & 4 letters (digraphs) →

5 real words with short vowels & 4 letters (blends) →

22 one-syllable words in sentences: short vowels & high frequency words →

8 nonsense words with short vowels  
 • 4 with 3 letters  
 • 4 with 4 letters (digraphs) →

#### Words and Sentences to Read

Set 1

see one they you are  
 rag lid dot hum bet  
 rich shop tack quit moth  
 dust step trip pond brag

Set 2

1. The cat hid in a box.  
 2. The fresh fish is still on the wet grass.  
 3. Six flat shells were in my bath.

Set 3

vop yud zin keb  
 shap thid chut weck

# What Do We Know about Donald?

## Strengths

- He reads beginning and ending consonants, blends, and digraphs well.
- He reads real words quite accurately. (Missed one vowel: read *reach* for *rich*.)

## Weaknesses

- Short vowels are his most basic difficulty.
- He guesses when he reads even very simple sentences.
- His lack of ability to read nonsense words tells us he does not understand basic letter-sound correspondences, especially with vowels.

# Secondary Reading System

- What steps should be taken to assess reading skills in older students?
  - How do we use the Assessment triangle to help us know where to start?
  - How can we be efficient with assess at risk students?
  - How do we really find the root cause of our Secondary students reading difficulty?

## Secondary Reading System

### ■ Identify students at risk:

- State outcome assessment
- Program/district assessments
- Give students a Grade Level Fluency assessment

### ■ Give students who did not score well a fluency assessment 2-3 grades below grade level

### ■ Give students who didn't meet the target a diagnostic assessment

Screening for Secondary Students		Target Fall 127 wcpm
Student Names	6th Grade score	
Janie	78	
Marcus	135	
Sunshine	93	
Roy	110

## New Research Findings!!!!

### Pay Attention to Accuracy Percentage as an Indicator of Reading Competency

A new study, presented at the 2008 DIBELS Summit, by Marcia Davidson and colleagues indicates that **accuracy may be as important or more important than WCPM as a predictor of reading abilities.**

## Rate/Accuracy

### Calculating Accuracy Percentage

- To calculate Accuracy Percentage:
  - Divide WCPM by total words attempted.
  
- Example:
  - Susan attempts 100 words, makes 4 errors, and has a score of 96 WCPM.
  - $96 \div 100 = 0.96$  or 96% accuracy percentage

# Recommended Accuracy Benchmarks End-of-Year Grade-Level Materials

Grade	Time of Year		
	Beginning	Middle	End
1	NA	80%	90%
2	92%	95%	97%

Until more research is conducted on accuracy percentage, consider using the accuracy benchmarks above as part of oral reading fluency screening data.

Students who do not meet *BOTH* the WCPM and Accuracy Percentage benchmarks should be diagnosed for specific weaknesses that are the cause of the student not meeting benchmark.

The benchmarks are based on the Davidson study and on experience of the authors of the Diagnostic Decoding Surveys.

## Four Groups Based on ORF Accuracy

Green = Benchmark  
Yellow = Strategic  
Red = Intensive

### Accuracy 97% or higher

WCPM	Accuracy	ORF
<b>Strong Rate &amp; High Accuracy</b>		
Caitlin	172	99%
Lamar	169	99%
Nigel	152	99%
Kammie	146	99%
Jordan	140	99%

1

### Accuracy Below 97%

WCPM	Accuracy	ORF
<b>Strong Rate &amp; Low Accuracy</b>		
Thomas	106	94%

3

WCPM above Benchmark

WCPM below BM	WCPM	Accuracy	ORF
<b>WCPM Below Benchmark</b>			
Edward	91	94%	
Dejay	91	95%	
Chris	84	92%	
S		85%	
Z		81%	
Junior	57	91%	
Taylor	37	86%	
Archie	34	89%	
Harry	10	53%	

4

WCPM Below Benchmark

WCPM	Accuracy	ORF
<b>Low Rate &amp; High Accuracy</b>		
Devon	96	99%
Timothy	92	99%
Monay	91	99%
Jasmine	75	99%
Darius	73	99%

2

## What Do Screening Data Tell Us?

- WCPM and accuracy scores below benchmark, screening data indicate that a student might not be reading well enough to have strong comprehension.
- Screening data answer the question: ***“Is the student reading with appropriate rate and accuracy to indicate adequate comprehension?”***

Grade 5 - Winter 2009-2010 Reading - Curriculum Based Measurement

# NWF Accuracy

Page 3

These are sample Nonsense Word Fluency (NWF) Assessments given in the Fall of First Grade. Jaycob, on the left, attempted to "blend" many of his nonsense words (denoted by the solid line drawn underneath). However, what observations do you make about his Accuracy % and error patterns? Raquel's test, on the right, shows that she was reading sound-by-sound (short line under each letter). The rate scores for these two students are similar, but what support is indicated for each of these students?

# Tier Transition Report

- This report tells you ...
  - Data on One subskill at a time
  - What percent of students were Well Below, Below, Average, Above Average, Well Above Average
  - Movement from one category to another from Fall to Winter, Winter to Spring

## Morning wrap up

## Quote ...

“There are no secrets to success.  
It is the result of preparation,  
hard work, and learning from  
failure”

**Colin Powell**

For those we serve ...

Thank you ....
